### EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a communication with Jeff Rothenberg (Reg. No. 26,429) on 03/29/07.

The application has been amended as follows:

In the abstract:

Line 1, "dispenser apparatus comprises a basic housing" has been changed to -- dispenser apparatus includes a basic housing--.

Line 2, "a cartridge comprising two transverse flanges" has been changed to -- a cartridge including two transverse flanges.

Lines 5-6, "actuation mechanism comprising a fixed cam" has been changed to -- actuation mechanism which includes a fixed cam--.

In the claims:

Claim 1, lines 14-15, "transmission means making it possible to implement the functioning of a movable cam" has been changed to --transmission means having a movable cam--.

### *Reasons for Allowance*

2. The following is an examiner's statement of reasons for allowance: The claims are allowable because the prior art fails to teach a third toothed ring cooperating with a mechanism for starting rotation of the drums. The prior art also fails to teach that the

mechanism includes a transmission means having a movable cam allowing emergence of the cutting blade from the first drum, and the fixed cam and movable cams cooperate with one another at defining a path of the cutting blade, as set forth in claim 1.

Regarding claim 1, Kapiloff et al. (6,684,751), Kapiloff, teaches an automatically cutting dispensing appliance for wiping material of the type comprising a basic housing with a back face, a lower face, and receiving an articulated lid. Kapiloff also teaches that the housing receives cartridge defining a carrier structure including two transverse flanges receiving an upper part, connectors for supporting a reel of material, and a lower part. Kapiloff also teaches that two drums are arranged side by side without direct contact between them. Kapiloff also teaches a first drum being a blade carrier drum and a second drum being a guide drum. Kapiloff also teaches that the drums at one of their ends facing one another have first and second toothed rings allowing the connection and rotation of the drums with respect to one another. However, Kapiloff fails to teach a third toothed ring cooperating with a mechanism for starting rotation of the drums. Kapiloff also fails to teach that the mechanism includes a transmission means having a movable cam allowing emergence of the cutting blade from the first drum, and the fixed cam and movable cams cooperate with one another at defining a path of the cutting blade, as set forth in claim 1.

None of these references by themselves or in combination with the other prior art cited teach the claimed invention set forth in claim 1.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the

issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

*Comment*

3. In view of the amendments to claims 1-19, rejection of the claims under 35 U.S.C. 112, second paragraph is withdrawn.
